[YAML navigation.yml page template](#)

[YAML top-navigation.yml page template](#)

Purpose

This document outlines the creation of technical documents for the TomTom API suites. It gives you the React MDX Markdown templates designed for Github and Gatsby with the layout and structure of a document.

API document prerequisites

The creation, editing, and publishing of technical API documents require the use of the following

Language tools

- ReactJS MDX Markdown
- HTML5
- YAML
- ReactJS Components

A modern Independent Development Environment (IDE) tool

This can be Visual Studio Code, Notepad++, etc. You will use these IDE text editors to create and edit your content in HTML5 and MDX Markdown.

Download and install a version that suits your operating system:

- [Visual Studio Code downloads](#)
- [Notepad++ downloads](#)

Git & GitHub

Download and install the latest version of Git that suits your computer's operating system: [Git downloads](#)

Use Git to:

- Clone master repositories from Github to your local machine.
- Pull updates from Github.
- Create Branches in your local machine.
- Push your edited and committed files back to Github.

TomTom SDK Documentation

TomTom SDK documentation follows a different pattern, tools, and workflow.

SDK documents are authored in Asciidoc and then put through a 3rd Party tool to transform the asciidoc format into MDX Markdown format. SDK documents are also kept in Github repositories, like API documents.

API document workflow and publication process

- TW - Technical Writer
- PO/PM - Product Owner/Product Manager (please note that both the PO/PM and the team means the back-end team responsible for the API/SDK, not the Developer Portal team)
- PR - Pull Request

The process has two paths depending on the change.

1. Updating content of existing pages

- a. The team creates a new PR branch and a PR to the `develop` branch in the documentation repository on Github, with added or modified documentation pages, where:
 - i. The branch name contains the type of change - for example: `feature/update-map-display-api-added-x` and Jira issue number if it exists (optional).
 - ii. The PR title contains the source and destination branch names (nice to have), for example: `feature/NAV-12345 develop Added Map Display API example page.`
- b. Optional step - if you would like to have the TW review the content before the publication, please add them to the Jira ticket on your board, and appoint them as a Reviewer in the GitHub Pull Request.
- c. The PO/team merges the PR to `develop` in GitHub.
This will cause an automatic rebuild for content pages on the Gatsby Staging environment.
- d. The PO/team creates the release PR and merges it to `master`.
This will cause an automatic rebuild for content pages on the Production environment.

2. Adding new content (publishing a new API endpoint document)

- a. The PO/PM/team creates a DP Jira ticket (in the Jira DP Space) detailing their actions and planned production publication date.
 - i. Jira details:
 1. project=Developer Portal
 2. Type of ticket = Task
 3. Add a label "publications" to the label field in the ticket.
 4. Choose the 'Ready for the Kanban Board' option.
- b. The PO/PM/team creates a new branch and PR to the `develop` branch in the documentation repository on Github, with added or modified documentation pages, where:
 - i. The branch name contains the type of change and ticket number, for example: `feature/DP-12345`, `feature/DP-12345-updatemap- display-api-added-x`.
 - ii. The PR title contains the source and destination branch names (nice to have), for example: `feature/DP-12345 develop Added Map Display API example page.`
- c. The PO/team changes the Jira ticket status to `Ready for Review`.

- i. The TW (if appointed as a Reviewer) reviews and suggests content and formatting changes in the pages in the Github Pull Request.
- ii. The PO/team applies the TW's suggested changes to the pages.
- iii. The TW approves the PR content changes made by the PU, then moves the Jira ticket to Ready for testing status.
- iv. When the Pull Request gets approved and all Github Actions are successfully finished, the PO/team (or the TW) merges the PR in GitHub to the develop branch.
 - 1. This will cause an automatic rebuild for content pages on the Gatsby Staging environment.
 - 2. You can see the status of the running job with its content rebuild on the Slack channel.
- d. The PO/Team checks/reviews the pages rendered in the Gatsby Staging environment.
- e. The PO/Team creates a Pull Request from the pages that they want to publish (to do that, all changes already need to be in the "develop/Gatsby Staging" repo).
- f. If approval of the Developer Portal team is required, they will be added as reviewers.
- g. The PO/Team moves the DP Jira ticket to Ready for Deploy status.
- h. When the Pull Request gets approved by the TW, the PO/Team (and/or DP team member) merges the PR to the master/Gatsby Publication branch which means content release to the public, or specific TomTom clients.
- i. The change will be picked up automatically by a Jenkins job, and the content on Gatsby production will be rebuilt.
- j. The Jira ticket is closed.

API MDX Markdown document formats

Important notes:

- All API documents (except the navigation.yml and top-navigation.yml files) must have a filename ending with .mdx. Standard Markdown is no longer used - only ReactJS MDX Markdown.
- Comments in the following templates are preceded by two forward slashes "://" to help you understand the doc structure and needed input. Delete them and the comments/directions following them when using a template to build a new page.
- Templates are built using four format languages:
 - MDX Markdown
 - HTML5
 - YAML
 - ReactJS Components
- Data tables within the documents are built with HTML5 because of their easy editing and readability.

FAQ page template

50
51 ## Getting started // Note: this is a React.js Component - edit Step 4 and Step 5 with the appropriate
content.
52
53 1. To get your API Key, you first need to be registered for the TomTom Developer Portal. If you don't have an
54 account, no worries! <a href="https://developer.tomtom.com/member/register" target="_blank">Register</a> / <a
55 href="https://developer.tomtom.com/user/login" target="_blank">Sign in</a> now before continuing.
56 2. Once you are registered, go to your <a href="https://developer.tomtom.com/user/me/apps" target="_blank"
57 >Dashboard</a> and locate the API Key that you would like to use (we've created the first one for you, it's
58 called My first API Key).
59 3. Read the documentation and start coding.
60 4. Consider using the TomTom xxxx for <a href="https://developer.tomtom.com/xxxxx" target="_blank">xxxxx</a>.
61 5. Check related <a href="https://developer.tomtom.com/blog/tag/xxxxx" target="_blank">Blog articles</a> for
62 further information.
63 <GettingStarted />

8
9 ## Purpose
10
11 This endpoint is used to ..... ## Request data
12
13 ### HTTPS Method: `GET`
14
15 * Constants and parameters enclosed in curly brackets `{}` **must be replaced** with their values.
16 * Please see the following [Request parameters](#request-parameters) section with the required and optional
parameters tables for their values. The generic request format is as follows.
17
18 ````markdown [type=get] [title=URL request format] https://{{baseUrl}}/xxxxx/{{versionNumber}}/xxxxx/{{query}}.
{{ext}}?key={{Your_API_Key}}
19 ```
20
21 ````markdown [type=get] [title=URL request example] https://{{baseUrl}}/xxxxx/{{versionNumber}}/xxxxx/{{query}}.
{{ext}}?key={{Your_API_Key}}
22 ```
23
24 ````markdown [type=get] [title=curl command request example]
25 curl 'https://{{baseUrl}}/xxxxx/{{versionNumber}}/xxxxx/{{query}}.{{ext}}?key={{Your_API_Key}}'
26 ```
27
28 ### Request parameters
29
30 The following table describes the parameters that can be used in a request.
31
32 - Required parameters **must** be used or the call will fail.
33 - Optional parameters may be used.
```

```
34 - If there is a default value that will be assumed when an optional parameter is not used, it is shown in
35 - the table.
36
37 <table style={{ overflowWrap: 'anywhere' }}>
38 <thead>
39 <tr>
40 <th colspan="2" style={{ fontSize: '1em', fontWeight: 'bold' }}>Required parameters</th>
41 </tr>
42 <tr>
43 <th scope="col" style={{ fontSize: '1em', fontWeight: 'bold', width: '250px' }}>Parameter</th>
44 <th scope="col" style={{ fontSize: '1em', fontWeight: 'bold' }}>Description</th>
45 </tr>
46 </thead>
47 <tbody>
48 <tr>
49 <th><code>baseUrl</code>
50 *string*
51 </th>
52 <td>Base URL for calling the API.
53     Value: <code>api.tomtom.com</code>
54 </td>
55 </tr>
56 <tr>
57 <th><code>versionNumber</code>
58 *string*
59 </th>
60 <td>Service version.
61     Value: The current value is <code>2</code>.
62 </td>
63 </tr>
64 <tr>
65 <th><code>key</code>
66 *string*
67 </th>
68 <td>An API Key valid for the requested service.
69 See: [How do I get a TomTom API Key?](https://developer.tomtom.com/how-to-get-tomtom-api-key) Value: Your
valid API Key.
70 </td>
71 </tr>
72 <tr>
73 <th><code>param name</code>
74 *datatype*
75 </th>
76 <td>
77 Description xxxxx Value: xxxxx
78 <ul>
79 <li>xxxxx</li>
80 <li>xxxxx</li>
81 </ul>
82 </td>
83 </tr>
84 <tr>
85 <th colspan="2" style={{ fontSize: '1em' }}>Optional parameters</th>
86 </tr>
87 <tr>
88 <th scope="col" style={{ fontSize: '1em', fontWeight: 'bold', width: '250px' }}>Parameter</th>
89 <th scope="col" style={{ fontSize: '1em', fontWeight: 'bold' }}>Description</th>
```

```

90 </tr>
91 <tr>
92 <th><code>param name</code>
93 *datatype*
94 </th>
95 <td>Description
96 Default value: <code>xxxxx</code>
97 </td>
98 </tr>
99 <tr>
100 <th><code>param name</code>
101 *datatype*
102 </th>
103 <td>Description
104 Default value: <code>xxxxx</code>
105 </td>
106 </tr>
107 </tbody>
108 </table>
109
110 ### Request headers
111
112 The following data table describes HTTP request headers of particular interest to the [Endpoint 1](xxxxxxxxx)
client.
113
114 - Required headers must be used or the call will fail.
115 - Optional headers may be used.
116 - The order of request headers is not important.
117
118 <table style={{ overflowWrap: 'anywhere' }}>
119 <thead>
120 <tr>
121 <th scope="col" style={{ fontSize: '1em', fontWeight: 'bold', width: '250px' }}> Optional headers
122 </th>
123 <th scope="col" style={{ fontSize: '1em', fontWeight: 'bold' }}> Description
124 </th>
125 </tr>
126 </thead>
127 <tbody>
128 <tr>
129 <th id="accept-encoding" scope="row">
130 [Accept-Encoding](https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/Accept-Encoding)
131 </th>
132 <td>
133 Requests that the response be compressed. Value: <code>gzip</code>
134 </td>
135 </tr>
136 <tr>
137 <th id="content-encoding" scope="row">
138 [Content-Encoding](https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/Content-Encoding)
139 </th>
140 <td>
141 Specifies the used compression of the request body. Currently, only
142 <code>gzip</code> is supported. If not specified, no compression is assumed. This is equal to specifying
<code>identity</code>.
143 <b>
144 Note: This header is optional and can only be used for
145 <code>POST</code> requests.

```

```
146 </b> Values:  
147 <ul>  
148 <li>  
149 <code>identity</code>  
150 </li>  
151 <li>  
152 <code>gzip</code>  
153 </li>  
154 </ul>  
155 </td>  
156 </tr>  
157 <tr>  
158 <th id="content-type" scope="row">  
159 [Content-Type](https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/Content-Type)  
160 </th>  
161 <td>  
162 Specifies the MIME type of the body of the request.  
163 <b>  
164 Note: This header is required for <code>POST</code> requests.  
165 </b>  
166 Value: <code>application/json</code>  
167 </td>  
168 </tr>  
169 <tr>  
170 <th scope="row">Tracking-ID</th>  
171 <td>  
172 Specifies an identifier for the request.  
173 <ul>  
174 <li>The value should be unique for each request.</li>  
175 <li>  
176 The value must match the regular expression  
177 <code>'^[a-zA-Z0-9-]{1,100}$'</code>.  
178 </li>  
179 <li>  
180 If specified, the same value is sent back in the similar-named response header. Otherwise, a generated value  
may be sent back.  
181 </li>  
182 </ul>  
183 </td>  
184 </tr>  
185 </tbody>  
186 </table>  
187  
188 ## Response data  
189  
190 ### Response body  
191  
192 For illustrative purposes the example below is neatly indented and includes all possible response fields.  
Actual responses are more compact and the fields present will vary based on the result type and the data  
available. See the following response fields documentation for more information.  
193  
194 <Accordion label="Response body - JSON" isClosed>

8
9 ## Overview
10
11 This TomTom Release Notes page records the release date with changes and bug fixes associated with a product
release. The release dates are in descending order starting with the most recent update. Map data is released
twice a week.
12
13 ### Release date: 2023.xx.xx
14
15 **Changes:** 
16
17 - [Endpoint name](https://developer.tomtom.com/yyyyyy/): // Enter the endpoint name and link.
18 - // Give a short description of the change - Added, Removed, Deprecated, Improved, etc.
19 - [Endpoint name](https://developer.tomtom.com/yyyyyy/): // Enter the endpoint name and link.
20 - // Give a short description of the change - Added, Removed, Deprecated, Improved, etc. ### Release date:
2023.xx.xx
